Adulticides

envion

EVOLUER

Vectofofos 1.5 ULV

Adulticides

Oil based

- **Evoluer 4-4: Ready to Use**
- **Evoluer 30-30**
- **Evoluer 31-66**
- **Vectofofos 1.5: Chlorpyrifos**
 - **Ideal for your pyrethroid resistance program**
 - **An organophosphate (pesticide class change)**
 - **Very soon to go away**

Adulticides

Water soluble

Guaranteed to remain in suspension

- **Envion 30-30**
- **Aqualuer 20-20**
- **Envion 4+4 RTU**

Triple rinse is a breeze with water soluble products

Adulticides

Aqualuer 20-20

- **Very stable**
- **Blended with orange oil**
 - **Smells nice and fruity**
 - **Keeps lines and nozzles squeaky clean**
- **Extensively tested by our military**
- **Performs extremely well under harsh arid conditions**

Adulticides

Envion 30-30

- **Remains in suspension when mixed with water**
- **Can be mixed and stored in bulk**
- **Less oils:**
 - **Environmentally considerate**
 - **Cost effective**
- **Labeled for ground and aerial applications**
- **Triple rinse simplified**

Dosematic

Dosematic mixing unit

Larvicides

ProVect

Sustain MBG
Biological Larvicide

Larvicides

Provect Products

- Contain Temephos
- Effective against all instars

- 40% - 50% reduction in larvae

▪ **Gone Dec. 31st 2015**

- Economical and cost effective
- A fail-safe larvicide for both ground and aerial applications

Larvicides

Sustain MBG

- Time released BTI corn cob granule
- Each layer is covered by water soluble film
- Now labeled for pre-treat!!!
- Last layer is free BTI, immediate results
- Lasts at least 3-4 weeks
- A cost effective *high residual* larvicide

Larvicides

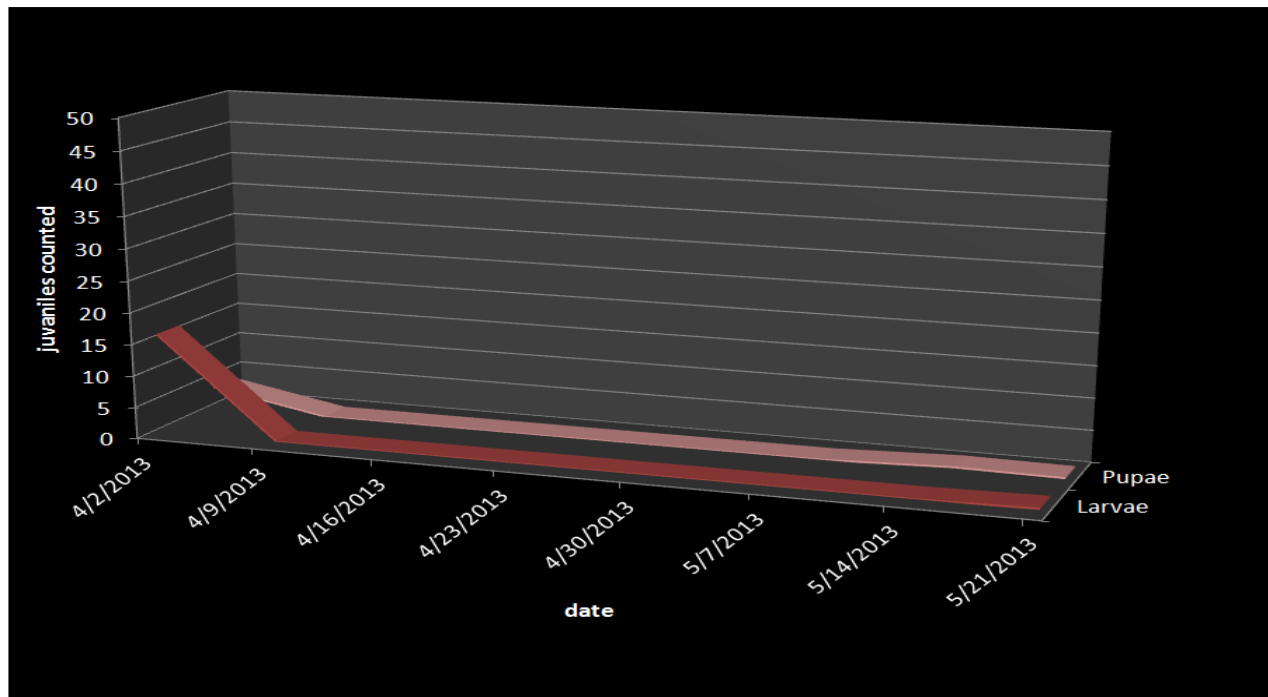

Sustain MBG

- **Layered BTI labeled for all your habitats**
 - Catch basins
 - High organic
 - Containers
 - Dredge spoils
- **40# coffee bags with vapor valve for assured freshness**
- **8# coffee bags are now available**

SUSTAIN MBG: Studies

Harrison County, MS

Continued control for 4-6 weeks at maximum label rate

SUSTAIN MBG: Studies

Bell Circle: Harrison County, MS

Highly organic run off water, Sustain MBG was applied at max rate.

The predominant species were *Culex restuans* *Culex*

quinquefasciatus, *Psorophora ferox* and *Ochlerotatus sticticus*.

SUSTAIN MBG: Studies

Lee County Mosquito Control District

Evaluated aerial application efficacy and longevity of Sustain MBG median rate to a mangrove environment.

Culex nigripalpus and *Ochlerotatus taeniorhynchus* predominated

Larvicides

Lee County, FL

Pupae were suppressed for the duration of the project, there was a dry down on the 12th and 13th where larvae were found in small pools.

Treated sites were flooded again on the 17th, and still showed control.

SUSTAIN MBG: Studies

Cypress Apartments

Median application rate of 10lb/ac

A slight uptick in larvae noted in the fourth week.

SUSTAIN MBG: Studies

Dorothy *was the site that showed control for the longest period*

The larval population suppressed for over four weeks

This site maintained control for the longest (lower organic content)

Much like
our ditches
and catch
basins

Larvicides

Bose Allan Catch basins

The application rate was 10 lb/ac

By the fourth week larvae were returning to the site.

"I want to know God's thoughts, the rest are details"

Albert Einstein

“Llamas don’t let your babies grow up to be Cow Toys”
Willie Nelson

BE well...
